Plasticine cat

Instructions No. 2144

Difficulty: Advanced

Working time: 1 hour 30 Minutes

This cheeky cat is made of plasticine. Learn here how you can model your own pet.

How to make the cat

This idea involves modeling modeling clay onto a Styrofoam ball (approx. Ø 20 cm). You need approx. 20 - 25 heaped tablespoons of modeling clay. Mix it according to the product instructions and coat the Styrofoam ball with it.

When mixed, plasticine is a low-dust, air-drying modeling clay that is very pliable and pleasant to model. Roughly preform the eyes, nose, snout ears, tail and paw and then work them out with a modeling tool. Since modeling clay dries slowly (about 48 hours for the clay to dry completely), you can enjoy modeling at your leisure.

Once you have made the cat mold and it is dry, you can begin the color design. Choose the base color for the cat fur, paint the white first, then the dark pupils of the eyes. Whiskers, nose, velvet ears, tail tip and other details paint on finely according to your personal taste - look forward to your new housemate!

Must Have

Concrete for kneading, 1,5 kg

Fill volume: 1.5 kg

9,99 € (1 kg = 6,66 €)
