

Anleitung: Herbstlicher Türkranz

Instructions No. 1371

With only little effort you can create a magnificent **autumn wreath** for your entrance door in a short time. The instructions describe how to do it.

Here's how it's done

Basis for this autumn wreath is a **natural wreath**. Wrap orange ribbon around part of the wreath. All other materials are fixed with hot glue.

First arrange the autumn leaves and glue the individual leaves onto the wreath. Cut small berry picks, the leaves from the berry pick orange and decorate the wreath with them

Suspension

For suspension, wrap wire or loop tape around the top of the wreath. If you use loop tape for this purpose, it should already be long enough for the suspension to be long enough. The wire can be formed into a short loop and fixed firmly. In a second step you can attach the suspension band to the wreath and also determine the length of the band.

"Finish"

Hang up the wreath. A small hedgehog and a tied bow can be used to decorate the perfect spot.

Extra-crafting tip:

If you want even more stability for your decorations, you can wrap the individual elements with wire. This way the wreath will also withstand autumn storms in the outdoor area. You can also use autumnal ribbon to wrap the wreath. Cover any unpleasant looking wrapped areas with additional berries/leaves.
