DIY Flowerpot

Instructions No. 2564

Difficulty: Beginner

Working time: 5 Hours

Put your indoor plants in the spotlight with decorative flower pots. In this tutorial, we show you how to easily create absolute decorative highlights for your home using tiles and a little porcelain paint.

Design tiles with colours

Transfer the patterns of the template onto the tiles with a pencil. Paint the surfaces with the glass and porcelain crayons. To ensure that the colour stays on the tiles permanently, bake it at 160° C for 30 minutes as described in the instructions.

Extra tip: To make the glass and porcelain paint from the pens last particularly well, clean the tiles beforehand so that they are free of grease and dust.

Assembling a flower pot from tiles

Saw the square strip into 8 pieces about 10 cm long.

Glue the tiles together at the edges with hot glue and fix a strip in all four corners. This provides more stability. Finally, grout the edges with cream paste.

And you can give your plants a new and decorative home in the tile flower pot.

Must Have

Tiles, Matt

Content: 4 pieces
Length: 15 cm
Width: 15 cm
Material: Ceramics

5,95 €
