

# Gewebter Obstkorb aus Filz

Instructions No. 582

Difficulty: Beginner

Working time: 30 Minutes

This basket is made of a stable Rattan cane-base on which felt strips are woven through bars of aluminium wire. It can be used as an extraordinary fruit bowl or as a decorative pot for green plants.

## And here's how it works

Primer the rattan cane floor in ice blue and let it dry. Cut off pieces of different lengths from aluminium wire and put it through every second hole from above. Put alternately blue and green Acrylic balls on the wire under the floor and glue it to the floor with hot glue

Cut the felt tapes in half lengthwise and weave blue and green alternately through the wire frame, fix the ends with hot glue  
Let both the front and the back of the felt ribbons look outwards

Bend every second wire outwards to the spiral with round nose pliers and hang a faceted pin on it with a small piece of wire. Shorten the remaining wire ends and glue blue facet balls on them.

This idea is timelessly beautiful!
