Goldener Stern aus Holz

Instructions No. 1029

Who says that a flower arrangement at Christmas time must be only ? This star made of robust wood exudes a festive mood with its classic gold tone. Decorated with Fir and small stars, the theme is harmoniously maintained here.
A special highlight is the Fröbelstern, which you make separately and is perfectly integrated into the Christmas decoration.

And it is as simple as that:

Prime the front compartment in Ivory and the rest of the star in Gold. Let it dry well.
Make the Fröbelstern according to the instructions in the package.
Remove the unprinted layers at Napkin and spray the spray adhesive onto the desired areas on the star.
Then stick the motif onto the sprayed areas with Napkin varnish .
When everything is dry, cut off the excess with a scalpel.
Then cut a little bit of dry stick material and put it into the cutout. Now cut the fir branches into pieces and put them into the sticky material.
Tie a bow out of the checked ribbon and thread the decoration-Jingles on it. Decorate Fir with the sprinkling stars, the Froebel stars and the check ribbon. Use the hot glue to fix it, so you can enjoy your advent arrangement for a long time.

Must Have

VBS Star with compartment
