Modelled house front with tea light

Instructions No. 2638

Difficulty: Advanced

Working time: 4 Hours

This great **house decoration** is very easy to recreate thanks to our free **template**. A tea light gives off a nice cosy light through the windows, making it the perfect Christmas decoration for your home too!

This is how the house decorations are made:

Knead the **modelling clay** "Porcellana fantastica" well and then roll it out. Transfer the **template** to the modelling clay by first scoring the outlines and then cutting them out with the cutter.

Now knead the **concrete mass** and roll it out. Cut a square out of the mass so that later there will be room for the house and a tea light as well as desired decorative elements. Press the **tea light glasses** in so that an indentation forms in the concrete mass. This will give the tealight a stable place once the concrete has dried. Press a round rod or similar onto the front of the slab where the houses will later be placed, so that an indentation is also formed

there.

After the drying time, decorate the houses with **leaf metal** as desired.

Glue the houses into the prepared notch using **hot glue**. Now you can decorate the stand plate as you wish. Place the tea light in the designated spot and glue on poinsettias, for example, as in our decoration.
