Mosaic bird bath with frog king

Instructions No. 1540

Difficulty: Beginner

Working time: 1 hour 30 Minutes

Treat yourself to your own Frog King **and** your garden or balcony to a decorative bird bath **!** This is cast with **creative concrete** and individually designed with **mosaic tiles** .

2.5 kg of creative concrete is required for the bird bath and frog king.

Bird watering place made of cast concrete

The mass is converted into a moist mass according to the instructions on the product packaging **Concrete mass** touched: The powder is poured into a container. The specified quantity of water is gradually stirred into the powder until the consistency of the concrete can be modelled well

The mixed casting concrete is now **poured** into the large " **circle"** mould **, the small circle mould** is placed in the

large mould and weighted down.

Watering the Frog King

Use the wet concrete casting slip and cast the frog king in one step! For this purpose, the latex mold Frog King is used.

Hang latex mold in a container with a large opening so that it can not tip over. Then fill the mold with the casting compound.

How long does concrete mass take to harden?
Depending on the size of the casting mould, cast concrete mass requires approx. 24 to 30 hours for curing. Afterwards the hardened bird watering place and also the frog can be released from the mould.

Mosaic on the bird bath

The bird bath can be **covered** with small mosaic tiles according to your personal taste: each tile is positioned individually and the tiles are fixed to the bottom of the bird bath with mosaic glue.

In the next step the **Joint Filler** "washed away." For this the Joint Filler is stirred into the appropriate quantity of water and distributed over the mosaic picture with a Bristle brushes . It is important that the mass fills up all spaces between the mosaic stones. When the Joint Filler has dried, the mosaic can be carefully wiped with a damp sponge.

After 24 hours drying time, the stones can be wiped again with a damp cloth and polished with a soft cloth.

So that you can also fill the bird bath with water, you should seal the mosaic surface or the inner surface of the bath with **cold glaze** (casting resin). The cold glaze pack consists of 2 components, casting resin and hardener. Mix them in a 1:1 ratio according to the product instructions and then pour the transparent glaze onto the surface. Once this is thoroughly dry (takes about 1 day!), it is waterproof, scratch and abrasion resistant.

Frog King Finish

Give the Frog King a **golden crown** with brush and paint **and** place it on the birdbath - if possible fix it with glue.

Enjoy your new highlight for the garden!

Must Have

Concrete for creatives, 1,5 kg

Weight: 1.5 kg

9,99 € (1 kg = 6,66 €)
